# MetaGovernance®

## Fact Sheet

## A New Paradigm

Information governance becomes a competitive game changer when the focus is top-down, business-driven, technology-enabled, and integrated tightly into the value chain of the organization. Our framework provides a paradigm shift that moves governance from back-office risk reduction to boardroom revenue generation strategies and management execution.

MetaGovernance has redefined the information governance paradigm with a holistic, business-driven model that:

- Defines information governance as an overarching framework that encapsulates data, information, reporting applications, reconciliations, controls, and organizational stewardship into a trusted platform of information for business operations and disclosure.

- Results in competitive advantage through effective utilization of accurate information at the enterprise level.

- Is based on systems thinking principles encapsulated in our "Navigation to the Future" implementation strategy.

- Provides technology-empowered Information Governance with (a) targeted integration of reporting and controls, (b) An enterprise view of the information value chain with clearly assigned responsibilities (c) ongoing monitoring of data integrity through automated controls.

A New Paradigm in Information Governance is Dawning...

## Our Company

MetaGovernance's technology-empowered governance framework enables clients to manage, harness, optimize, and leverage their information to realize business objectives in a cost-effective and sustainable manner.  We offer:

- Unparalleled expertise and passion for solving complex information problems.

- Proven frameworks to eliminate chaos, waste, and error from the information flow across your organization.

- Bundled reporting and governance solutions delivering both business content, and evidence that the content is consistent across the organization.

- Cost-effective, permanent solutions to chronic information problems.

MetaGovernance  is focused on one thing and one thing alone – delivering business value from information assets through an effective information governance framework comprised of leading edge software and integration services.

# MetaGovernance® Offerings

### Trusted Enterprise Reporting Solutions

MetaGovernance's reporting solutions encapsulate state-of-the-art information delivery technology, a proven information governance framework, and automated reconciliation of information sources. This powerful merging of technology and governance delivers accurate, timely information for business operations and financial reporting.

*Target Client:* Organizations that are tired of failed reporting solutions, spend countless hours manually validating data warehouse reports, or end up trying to solving the same data and reporting issues time and time again.

### Governance Software Solutions

MetaGovernance delivers technology-enabled governance solutions that have been specifically designed to address the complex puzzle of Information Governance. Our solutions have been developed by a dedicated team with years of hands-on experience across multiple industries. MetaGovernance's software is not a repackaged data tool riding the expanding interest in Information Governance.

*Target Client:* Organizations that want to move beyond "governance by spreadsheet" or need to integrate an automated Reconciliation Control Framework®.

### Comprehensive Governance Frameworks

MetaGovernance is dedicated to working with companies to ensure they have timely and accurate information to run business operations and financial disclosure against the backdrop of highly-regulated or competitive environments. Our governance frameworks significantly reduce enterprise information and compliance risks.

*Target Client:* Organizations seeking to increase operational efficiency and reduce enterprise risk through an integrated information governance program.

## MetaGovernance Results

**The results of the new paradigm competitive advantage, confidence, and operational efficiency. Just imagine:**

1. Transparency regarding the source and use of information across the enterprise.

2. The day spent actually using information towards business objectives, not collecting and validating data.

3. Timely and successful completion of data reporting projects.

4. An integrated framework keeping all stakeholders in the know of the state of information consistency, good or bad.

5. Total confidence that the reports sent at quarter close, or to the board are accurate.
